

DOES YOUR PROJECT NEED A

WEB DESIGNER OR A WEB DEVELOPER?

I NEED TO CREATE A NEW WEBSITE FROM THE GROUND UP.

I NEED TO MAKE AN EXISTING SITE LOOK BETTER.

Do you need data management for things like ecommerce, content development?

Do you want a new design or do you just want to update existing images?

YES

NO

Do you also need help with user experience, navigation, or aesthetics?

I need a new design.

Do you already have a design?

NO YES

Just update images so it looks up-to-date.

NO YES

I already have a functional design for the site.

BACK-END WEB DEVELOPER

These developers use programming language like PHP, Ruby, Java, Pearl and Python to create interactive websites that use behind-the-scenes applications to improve security, store data and let the designers update content.

FRONT-END WEB DEVELOPER

Front-end developers use programming language like HTML, CSS & Javascript to bring a designer's concept to life so users can navigate sites easily without encountering glitches.

WEB TEAM

A good web team will have experts in design, back-end development and front-end development to build a website from the ground up.

WEB DESIGNER

Website designers create the look of websites, navigation bar, icons and other attributes, but they do not have the technical skills to make those designs come to life on the screen.
